Customer Reviews

This book made me feel good about doing things right. Hint: Ignore your "King of the Hill" neighbors who stand around mumbling, "Yep, nope, kinda low over there." And my favorite, "I don't need to see a measured drawing, I got it right here in my head." Seriously, just get selections from the tools you need list; get a 30' tape measure, and a long level, a string level, and a cheap calculator (for figuring how many cubit feet and how many yards of crushed lime rock and SRI sand (gritty yellow sand) you need to buy for a depth of 4"-6"). Try the basket weave brick design b/c it is easy and pretty to boot. You might want to buy another book on designing pathways and such like as a design idea supplement. If you can paint a wall you have the skills to lay bricks on a sand base. We don't need no stinking mortar!

Fairly detailed instructions on materials needed and methods used to build sidewalks. Lots of photos as well. I think it will be the only book I will need to complete the two projects that I plan to build within the next two months.

One of the many home depot books I purchased. Great step by step instructions with pictures. Makes all jobs a bit simpler. Really good price too.

Just like new & much more inexpensive than purchasing them at Lowe's or Home Depot!!

Great book. Detailed step by step instructions. Great overall purchase can't wait to start some of these projects. Will update later on results.

My wife and I decided to build a patio in front of our house, and this particular book is so useful in giving insights and techniques about it.

Excellent pictures and easy to understand.

Great job, outstanding service, item as described
